

Savishka Ashan

Senior Platform Engineer

✉ savishkashan@gmail.com ☎ 0426948761 📍 Brisbane 🌐 <https://www.linkedin.com/in/savishka-ashan/>

Summary

Lead Platform Engineer and infrastructure architect specializing in multi-cloud environments (AWS, Azure, GCP) and complex digital transformations. Proven expertise in assuming technical ownership of business unit infrastructures, standardizing cloud operations, and driving engineering efficiency through AI-centric development and automated deployment pipelines. Strong background in bridging legacy systems to modern, cloud-native architectures while maintaining rigorous ISO 27001 security standards. Adept at aligning infrastructure strategy with overarching business goals, mentoring engineering teams, and optimizing cross-tenant cloud deployments.

Education

University of Southern Queensland	Bachelor of Information & Technology
Networking & Cyber Security	Toowoomba • 2018-2021

Experience

ValuePRO Software	Brisbane
Senior DevOps Engineer	2024-Present

- Assumed overarching technical ownership for a secondary business unit (CentroAssist), architecting and executing a comprehensive cross-tenant Azure migration.
- Transitioned complex workloads—including Kubernetes clusters, serverless architectures, and multi-model databases (OrientDB, SQL Server)—into a dedicated environment with zero structural disruption.
- Directed the engineering department's adoption of AI-centric development methodologies, integrating agentic workflows (MCP servers, Claude Code) and establishing KPIs to measure department-wide efficiency gains and developer velocity.
- Engineered a fully automated deployment pipeline using Ansible and PowerShell, reducing customer instance provisioning time by 97% (from 4 hours to 7 minutes).
- Established standardized infrastructure-as-code (IaC) practices across multiple cloud environments, utilizing both Terraform and Pulumi to architect scalable production workloads and enforce automated compliance checks.
- Led the strategic transition from proprietary legacy tools to open-source solutions to optimize operational costs, including orchestrating backend migrations from SQL Server to PostgreSQL and replacing proprietary logging/firewall stacks with SigNoz and Sophos.
- Managed total infrastructure health and disaster recovery processes in collaboration with operations leadership, maintaining high availability for SQL Availability Groups and replication failovers across global client workloads.

Herron Todd White	Chermside
DevOps Engineer & Security Analyst	2022-2024

- Directed the rapid recovery and stabilization of critical systems following a major security event, successfully lifting-and-shifting affected on-premise workloads to a hardened cloud environment.
- Led organizational ISO 27001:2013 compliance initiatives, managing surveillance audits, aligning security postures with ISO 9001 standards, and building a Wazuh SIEM infrastructure from the ground up for real-time threat detection.
- Designed and engineered a robust hybrid cloud architecture connecting on-premise infrastructure to GCP, managing complex BGP routing, firewall policies, and IAP tunneling for secure, seamless migrations.
- Managed multi-cluster Kubernetes environments via Rancher and optimized enterprise data pipelines for business intelligence teams utilizing Jenkins, BigQuery, and PostgreSQL.

Herron Todd White	Chermside
IT Support Officer	2021-2022

•

Managed Active Directory, Group Policies, and hybrid infrastructure operations, building foundational automation workflows using PowerShell and Atera to streamline technical support

Projects

UG-Nexus Solutions (ABN-52105454007)

2026-Present

Founder & Lead Architect

- Established the technical and operational foundation for an independent software venture, managing domain procurement, Google Organization verification, and core cloud infrastructure design.
- Architected and launched **NexusTutor**, a full-stack, cross-platform application developed natively using Flutter and Dart.
- Engineered a secure, serverless backend architecture utilising Supabase for database management and Firebase for hosting.
- Designed and implemented automated CI/CD pipelines using GitHub Actions to streamline deployments, routing traffic securely through Cloudflare for DNS management and edge protection.

Skills

☞ Cloud Computing & Infrastructure

Expert
AWS, Azure, GCP, Kubernetes, Docker, Rancher, Proxmox, Hyper-V, VMware, Cloudflare, Helm

☞ Enterprise Networking & Protocols

Expert
OSI Model, BGP & Dynamic Routing, VPC Peering, TCP/IP, DNS / Cloudflare, Subnetting, Hybrid Cloud Topology, Load Balancing

☞ Infrastructure as Code & Automation

Advanced
Terraform, Pulumi, Ansible, PowerShell, Bash, CICD

☞ Security & Observability

Advanced
ISO 27001, Wazuh SIEM, SigNoz, Network Security, SAST & DAST, OWASP

☞ Database & Serverless Architecture

Advanced
PostgreSQL, SQL Server, Supabase, Firebase, OrientDB, BigQuery

☞ AI-Centric & Application Development

Advanced
AI-Centric Development, Model Context Protocol (MCP), Claude Code, Flutter, Dart, Linux, Modernising, Gemini Code, AntigraVity
